About this pack: information for teachers

This pack contains the assessment materials for Unit 2: Digital Practices.

Within this pack, you will find:

- information for teachers on how to manage arrangements for assessment
- overview of candidate requirements
- research requirements
- assessment details
- the client briefs
- a candidate mark record sheet
- a **candidate pack** which includes:
 - overview of requirements
 - research requirements
 - client brief
 - assessment information: a detailed breakdown of each task, the evidence and additional instruction, the assessment conditions (controls) under which the task is to be completed, timing and resources
 - appendix of skills
 - the mark scheme which must be used to assess candidate work
 - information for candidates, which tells candidates about things that they must and must not do when they are completing the assessment
 - a Candidate Declaration Form.

You must provide each candidate with a copy of the complete candidate assessment pack.

Managing the assessment

This is a centre-marked (internal) non-examination assessment. The following arrangements must be followed when managing and marking the assessment

Time

Candidates must be allowed **20 hours** to complete this assessment. Candidates should spend approximately:

- 2.5 hours completing task 1
- 1 hour completing task 2
- 2.5 hours completing task 3
- 13 hours completing task 4
- 1 hour completing task 5.

The time suggested for each task takes account of the contribution of the task to the overall assessment requirements. There can be no changes to the total time available for this assessment. Centres can, however, amend the suggested time available for each task.

Research

Candidates can use research collected in non-supervised sessions.

Referencing

Candidates must reference any research brought into/developed during the NEA. Candidates must follow the guidelines on 'When to Reference a Source' found in Appendix 1 and 'How to Reference a Source' found in Appendix 2 of the document named 'Conducting Non-examination Assessments in National 14-16 Qualifications – Guide for Teachers'.

Assessment conditions

There are three levels of Assessment conditions: high, medium and low. The conditions relevant for this unit are stated below.

Level	Assessment conditions
High	Candidates complete work under formal supervision¹ – in a classroom, (e.g. with teacher supervision) following these rules: • No communication with peers is allowed (including unrelated topics) • No assistance may be given by the teacher beyond reading the instructions • Candidates must work independently, and all work must be their own • Candidate's work must always remain within the centre and stored securely between timetabled sessions • Wall displays or materials that could advantage candidates must not be visible • In line with JCQ regulations for non-examination assessments, the 'Warning to Candidates' and 'Unauthorised Items Poster' must be displayed.

Resources

There are three levels of resource conditions: none, specified and permitted. The relevant conditions for this unit are stated below.

Level	Resources
Specified	• Candidates may access only the specific resources stated in the Research Information and/or Assessment Information. This may include centre-provided resources or research candidates collected during the research phase • Internet access (and other resources) may be allowed for research if specified by the Assessment Information; teachers must monitor this • Candidates must not provide resources unless explicitly stated in the Assessment Information • Candidates must follow the 'When to Reference a Source' found in Appendix 1 and 'How to Reference a Source' found in Appendix 2 when using resources found in 'Conducting Non-examination Assessments in National 14-16 Qualifications – Guide for Candidates'

¹ There are no set requirements regarding the number of teachers/assessors required to be present during an assessment. However, the ratio must be sufficient to ensure appropriate supervision of candidates throughout. If only one teacher/assessor is present, they must be able to request assistance without needing to leave the assessment room. Under no circumstances should candidates be left unsupervised or unattended at any time.

Candidates must have access to the candidate assessment pack and any necessary resources, as specified in the detailed task tables within the candidate pack.

Supervision

Candidates must be supervised by an assessor whilst completing the activities. Centres must have in place systems to ensure candidates cannot access evidence they have been developing outside of supervised activities.

Authentication

Supervision must be in place to ensure the authenticity of evidence produced for summative assessment.

You should not provide input or guidance to candidates during the assessment time. This includes providing formative feedback on the evidence being produced. You can provide guidance on the requirements of the task and remind candidates of the mark bands and how they can be interpreted.

Candidates can review and redraft evidence independently within the time controls for the assessment.

Candidates must sign the declaration to confirm that all evidence submitted for moderation is their own work and that any sources used have been acknowledged.

Assessors must sign the declaration to confirm that evidence submitted for moderation was completed under the controlled conditions set out in this assessment.

Candidate evidence

The acceptable formats for evidence of each of the tasks is summarised in the task tables. Any modified assessment must enable the candidate to generate the evidence required in this table.

Marking the assessment

The marking scheme for this assessment is included in the candidate pack.

All marking of evidence must be made against the marking scheme provided. Evidence marked must comply with any requirements set out in the assessment pack.

Written evidence must be annotated to show how it relates to the mark band requirements.

Marking should only be undertaken by a designated assessor. An assessor should have appropriate expertise in the subject and level for a specified unit. The assessor is responsible for ensuring that:

- assessment is conducted under the controls specified in the task table
- they are clear about the requirements of the assessment and marking scheme prior to commencing assessment
- evidence presented for assessment is valid, authentic; reliable and credible
- assessment decisions are accurately recorded
- evidence is appropriately annotated
- judgements are only made against the mark band statements.

A mark record sheet must be completed for each candidate.

Further information

You should refer the WJEC Applied Qualifications (including Alternative Academic Qualifications): Assessment Guide / JCQ Instructions for conducting non-examination assessment for further information on managing assessment within our GCSE/Applied Qualifications.

This pack is the live assessment. It must not be used for practice purposes.

Assessment information

Based on the client brief, learners are required to collect digital assets to prepare for the non-examination assessment.

Overview of requirements

Learners are required to:

Outside non-examination assessment time:

- collect digital assets.

During the non-examination assessment time:

In Task 1, learners are required to:

- cleanse and organise data to ensure it is suitable for data analytics
- use data analytics to identify audience needs, trends and preferences.

In Task 2, learners are required to:

- create a digital product proposal
- create a time planning document.

In Task 3, learners are required to:

- plan annotated digital design options for a digital product
- justify their choice of design options.

In Task 4, learners are required to:

- design, create and test two functioning digital products including a multi-page website and either a computer game or a 2D animation.

In Task 5, learners are required to:

- evaluate their approach to testing and the functionality of their digital products.

Digital asset collection

To prepare for the non-examination assessment, learners should collect digital assets to include within their digital products. Collecting digital assets does not form part of the non-examination assessment time. The collection of digital assets does not need to take place all at once – learners are permitted to gather and add to their digital assets at any point during the assessment window. Collecting digital assets does not form part of the assessed tasks, but learners will need these to allow them to complete the assessed tasks.

Assessment

Assessment may be undertaken at any time during the qualification. However, centres should ensure that assessment is completed only when learners have undertaken the necessary teaching and learning and developed the required skills and knowledge.

The total mark for this unit is 80.

Guidance for Assessment

Each task has a separate assessment grid.

The appropriate band should be established by determining which performance descriptor best reflects the learner's performance.

The appropriate mark should then be established by determining the extent to which the learner has met the criteria within the relevant band – completely met (upper part of band), mostly met (middle of band), partially met (lower part of band).

Client brief: Digital product development for encouraging sustainable lifestyles

DyfodolGwyrdd is a social enterprise dedicated to promoting sustainable living and environmental awareness in the community. It organises various activities, workshops and campaigns to educate people about sustainable living practices and encourage them to develop environmental awareness.

DyfodolGwyrdd have tasked you with developing a digital product that will educate and promote sustainable living and environmental awareness.

Digital product development requirements:

DyfodolGwyrdd have conducted some initial research with anonymous people and have shared the dataset on the local area's carbon emissions, recycling rates and public awareness of environmental issues. This data will need to be cleansed and organised to enable data analytics, which will guide decisions into audience needs, trends and preferences. The dataset file is called **DyfodolGwyrdd_dataset.csv**.

They have also provided you with some qualitative data in the form of a mood board to convey initial design options and to assist with implementing digital products which align with audience needs, trends and preferences. The mood board file is called **Designer.jpeg**.

DyfodolGwyrdd is looking to enhance engagement with the community through digital products which include:

- a multi-page website
- a digital product (either a computer game or a 2D animation) which aligns with the outcomes from their data analytics.

They have provided a file which contains the required text for each page of the website and the pages that they require. The file is called **Webpage.DOCX**.

The project is to be completed over a two-month period². You are required to produce a time planning document to ensure the development process is completed on time. This will contain information on planned tasks, activities and milestones.

² Please note: The two-month period is provided to help contextualise the task. It is not a requirement that the non-examination assessment must be completed within a two-month window.

WJEC Digital Technology

Candidate Assessment Pack

Unit 2: Digital Practices

3490U2

About this pack: information and instructions for candidates

This candidate assessment pack is for candidates completing Unit 2 – Digital Practices.

Within this pack, you will find:

- overview of candidate requirements
- research information
- the client briefs
- assessment information: a detailed breakdown of each task, the evidence requirements and the conditions (controls) under which the task is to be completed
- appendix of skills that should be used when developing your project
- information for candidates, which tells you about things that you must and must not do when you are completing the assessment
- the mark scheme which will be used to assess your work
- a Candidate Declaration Form.

You will have 20 hours in total to complete this assessment. You should spend approximately:

- 2.5 hours completing task 1
- 1 hour completing task 2
- 2.5 hours completing task 3
- 13 hours completing task 4
- 1 hour completing task 5.

Supervision

You will be supervised throughout the assessment.

You do not need to be supervised when collecting digital assets. This collection of resources does not form part of your non-examination assessment time.

Monitoring

- Teachers may provide guidance and support to you to ensure that you have a clear understanding of the requirements, including the brief and the assessment grid.
- Once the creating and developing work is underway, feedback must be limited to general advice on what needs to be improved. Teachers must not provide specific guidance on how to achieve these improvements.
- Teachers must see your ideas in progress at different stages during the process to be able to authenticate the work as your own and complete the necessary authentication documentation.

Resources

You are permitted to collect digital assets to use within your digital products. These are collected outside your non-examination assessment time.

Your teacher is allowed to help you to understand the assessment requirements, client brief and the tasks, but there are rules about the kind of help and how much they can give you. You should speak to your teacher if you have any questions about what you are and are not allowed to do as you are completing the tasks, as they will know how much help they are allowed to give you.

It is important that you work independently from other candidates and the work produced should be your own unaided work. You and your teacher will be required to sign a declaration that all work presented is your own work.

You are advised to check your work carefully to make sure that it is accurate and correct.

Overview of requirements

You are required to:

Outside non-examination assessment time:

- collect digital assets.

During the non-examination assessment time:

In Task 1, you are required to:

- cleanse and organise data to ensure it is suitable for data analytics
- use data analytics to identify audience needs, trends and preferences.

In Task 2, you are required to:

- create a digital product proposal
- create a time planning document.

In Task 3, you are required to:

- plan annotated digital design options for a digital product
- justify your choice of design options.

In Task 4, you are required to:

- design, create and test two functioning digital products including a multi-page website and either a computer game or a 2D animation.

In Task 5, you are required to:

- evaluate your approach to testing and the functionality of your digital products.

Research information

Digital asset collection

To prepare for the non-examination assessment, you should collect digital assets to include within your digital products. Collecting digital assets does not form part of the non-examination assessment time. The collection of digital assets does not need to take place all at once – you are permitted to gather and add to your digital assets at any point during the assessment window. Collecting digital assets does not form part of your assessed tasks, but you will need these to allow you to complete your assessed tasks.

Client brief: Digital product development for encouraging sustainable lifestyles

DyfodolGwyrdd is a social enterprise dedicated to promoting sustainable living and environmental awareness in the community. It organises various activities, workshops and campaigns to educate people about sustainable living practices and encourage them to develop environmental awareness.

DyfodolGwyrdd have tasked you with developing a digital product that will educate and promote sustainable living and environmental awareness.

Digital product development requirements:

DyfodolGwyrdd have conducted some initial research with anonymous people and have shared the dataset on the local area's carbon emissions, recycling rates and public awareness of environmental issues. This data will need to be cleansed and organised to enable data analytics, which will guide decisions into audience needs, trends and preferences. The dataset file is called **DyfodolGwyrdd_dataset.csv**.

They have also provided you with some qualitative data in the form of a mood board to convey initial design options and to assist with implementing digital products which align with audience needs, trends and preferences. The mood board file is called **Designer.jpeg**.

DyfodolGwyrdd is looking to enhance engagement with the community through digital products which includes:

- a multi-page website
- a digital product (either a computer game or a 2D animation) which aligns with the outcomes from their data analytics.

They have provided a file which contains the required text for each page of the website and the pages that they require. The file is called **Webpage.DOCX**.

The project is to be completed over a two-month period. You are required you produce a time planning document to ensure the development process is completed on time. This will contain information on planned tasks, activities and milestones.

Assessment information

Tasks

	Task	Evidence	Controls
1	Use the quantitative dataset provided: Perform the following tasks using suitable spreadsheet skills, formulas and functions. (a) Cleanse and organise the dataset to enable data analytics to take place. You should use a range of suitable spreadsheet skills categorised as basic, medium and complex (as listed in the spreadsheet skills, Appendix A). [5 marks]	Cleansed and organised dataset. Screen shot with concise written annotation or oral comments in a screen recording with concise explanations (written or oral) where spreadsheet skills are not obvious to the assessor.	Assessment conditions: High Resources: Specified
	(b) Using your cleansed and organised dataset, apply suitable data analytic skills to identify: • audience needs • audience trends • audience preferences. Present your findings in a suitable format - which should include appropriate graphs or charts. [5 marks]	Findings presented in a suitable format.	
Permitted resources: Dataset file as specified in your client brief			

	Task	Evidence	Controls
2	Develop a digital project proposal for the multipage website and chosen digital product. You should use the client brief, audience needs, trends and preferences, and the qualitative data provided. (a) Your digital project proposal must include: Specific and measurable success criteria that includes: • alignment with data analytics results • design aspects that reflect qualitative data provided • functionality and usability. [5 marks] (b) Time planning document to ensure the development process is completed on time, including: • tasks • activities • milestones. [5 marks]	Written document Time planning document. Please note a multipage website consists of 3 pages.	Assessment conditions: High Resources: Specified
Permitted resources: Qualitative data as specified in the client brief			

	Task	Evidence	Controls
3	Using your success criteria, client brief and qualitative data, complete the following tasks: (a) Plan annotated initial design options for: • a multipage website • your chosen digital product. [10 marks] Please note. You must plan at least two design options for each digital product.	Two initial design options for a multipage website. Two initial design options for your chosen digital product. Please note a multipage website consists of three pages.	Assessment conditions: High Resources: Specified
	Select the chosen design option that you will implement for your multipage website and chosen digital product. Complete the following task based on your selection: (b) Justify your choices of selected design options based on your success criteria. [5 marks]	A written justification	
Permitted resources: Qualitative data as specified in the client brief Digital assets			

	Task	Evidence	Controls
4	(a) Create a functional multipage website which uses the information provided by the client and which reflects your chosen design option from Task 3. Your website should use: • suitable media • effective navigation between pages • hyperlinks to external documents • consistent layout and styles. You should use a range of suitable website development skills categorised as basic, medium and complex (as listed in Appendix A) when creating your multipage website. [10 marks]	Screen shot evidence with concise written annotation or oral comments in a screen recording with concise explanations (written or oral) where website development skills are not obvious to the assessor. Conduct ongoing testing to ensure your multipage website and digital product meets your success criteria and functions as expected. No evidence of this testing is required. Exported website in hostable format (HTML, CSS & JS files) Please note a multipage website consists of 3 pages.	Assessment conditions: High Resources: Specified
	(b) Using your selected design option, create a multilevel computer game that uses: • scripting-based languages to control game behaviour • game characters, objects and environments including animation • sound effects and background music to enhance the gaming experience • intuitive, interactive and engaging interface.	Screen shot with concise written annotation or oral comments in a screen recording with concise explanations (written or oral) where computer game development skills or animation skills are not obvious to the assessor. Exported computer game as a standalone application downloadable from your website. <u>OR</u> Exported animation embedded / playable into the website.	

	You should use a range of suitable game development techniques from each level of complexity (categorised as basic, medium and complex, as listed in Appendix A). [25 marks] Or (b) Using your selected design options, create a 2D animation that uses: • suitable animation production skills • suitable sound to enhance the animation • multiple animation sets to depict various scenes and actions • animation timeline skills to control the timing and movement of animations. You should use a suitable range of animation techniques from each level of complexity (categorised as basic, medium and complex, as listed in Appendix A). [25 marks]	Conduct ongoing testing to ensure your multipage website and digital product meets your success criteria and functions as expected. No evidence of this testing is required.	
Permitted resources Qualitative data as specified in the client brief Digital assets Chosen design options			

	Task	Evidence	Controls
5	(a) Evaluate the effectiveness of your ongoing testing of your digital products. Refer to how your testing helped you to: • identify and remove errors • ensure the digital products operated as expected • meet the success criteria. [5 marks]	Written document No screen shot evidence of testing is required	Assessment conditions: High Resources: Specified
	(b) Evaluate how well your digital products meet your audience needs, trends and preferences. Refer to your: • completed digital products • development process • application of skills. [5 marks]	Written document No screen shot evidence of testing is required	
No new resources apart from resources specified in Tasks 1, 2, 3 and 4.			

End of tasks

Appendix A: Digital Skills

Levels of complexity

*** Complex

** Medium

* Basic

Spreadsheet skills
Correcting errors: • using built-in error checking tools * • locating and correcting specific errors using 'Find and Replace'* • using Data Cleaning Tools ** • adding missing data * • use of 'Remove Duplicates' tool * • use conditional formatting * • apply number formatting using standard number formats * • create and apply custom data and number formats **
Validate data against known standards or rules: • use 'Data Validation' tool* • create customised alert text for invalid data entries * • create custom rules using formulas for data validation **
Sorting: • one column using built-in sorting tools * • sorting by multiple criteria ** • sorting based on cell or font colour ** • using formulas to create dynamic sorting ***
Categorise: • create drop-down lists for categorisation * • grouping and rearranging rows or columns to organise data **
Format data and tables: • apply basic formatting such as, font styles, colour and borders * • use built-in table styles for consistent formatting * • use of 'Text to columns' tool*
Create and apply filters: • using built-in AutoFilter tool* • applying complex criteria for filtering data ** • creating custom filter criteria ** • using formulas to create dynamic filters ***
Pivot tables: • create basic pivot tables * • format pivot tables for better readability * • add calculated fields and items ** • create charts from pivot table data ** • use slicers to filter pivot table data ***
Performing basic arithmetic calculations: • addition * • subtraction *

- multiplication *
- division *

Using basic level formulas and functions:

- SUM *
- AVERAGE *
- COUNT *
- COUNTA *
- MAX *
- MIN *
- IF *

Using medium level formulas and functions:

- Nested IFs **
- VLOOKUP **
- HLOOKUP **
- COUNTIF **
- SUMIF **
- AVERAGEIF **
- SUBTOTAL **
- SEARCH **
- FIND **

Using complex level formulas and functions:

- INDEX ***
- MATCH ***
- FILTER ***
- SORT ***
- SORTBY ***
- UNIQUE ***

Website development skills	Animation development skills	Computer game development skills
using basic HTML (Hyper Text Markup Language) tags *	moving shapes*	importing sprites *
- setting up a basic webpage structure: - head * - body * - footer *	animating simple transformations (e.g., scale, rotation, position) *	attaching sprites to controllable objects *
linking between pages *	use of timeline folders *	inclusion of a scoring system *
creating basic navigation *	use of timeline layers *	creating sprites *
including images *	moving artwork *	use of sounds *
- using CSS (Cascading Style Sheets) for basic styling: - fonts * - colours * - simple layouts *	creating looping animations*	scripting basic controls *
- including multimedia elements: - image slider ** - embedding videos ** - embedding content from external sources (e.g., YouTube videos, Google Maps) **	applying basic visual effects (e.g., opacity changes, blurs) *	creation of on-screen instructions *
implementing responsive design with CSS (Cascading Style Sheets) **	multiple different sets (locations/ backgrounds) **	using paths for enemies **
using flexbox and grid layouts **	animated background **	animating sprites **
- adding basic JavaScript: - variables and data types ** - basic control structures (e.g., if-else) ** - use of date function **	multiple simultaneous animated events **	creation of splash screen **
applying basic SEO (Search Engine	lip-syncing for character dialogue**	inclusion of a health system **

Optimisation) principles: • alt tags ** • meta tags ** • semantic HTML (Hyper Text Markup Language) **		
• applying accessibility features: • ARIA (Accessible Rich Internet Applications) roles and attributes *** • complying with WCAG – (Web Content Accessibility Guidelines) ***	• use of background sound **	• scripting advanced features: • multi player ** • attack system ** • gravity *** • attack multipliers *** • speed multipliers ***
• advanced CSS techniques: • using CSS Grid for complex layouts*** • implementing animations and transitions***	• masking: • using masks to create reveals and hidden areas in animation** • using multiple masks for advanced effects. ***	• random object / enemy generation ***
• adding advanced JavaScript: • complex form validation*** • use of arrays *** • use of string methods *** • handling errors (e.g. try, catch, finally, throw) ***	• implementing particle systems for effects. ***	• creation of save states ***
	• use of rigged / boned asset for animation ***	• creation of a persistent leader board ***
	• correctly exported as embeddable content ***	• use of external controller ***
	• use of subtitles to match narration ***	• correctly exported as embeddable content ***
	• use of narration ***	
	• custom easing functions for precise control over animation timing. ***	
	• interactive animation through scripting ***	

The following mark scheme will be used to assess your work.

0 marks will be awarded if there is no evidence or submitted work is not worthy of credit.

Band	Task 1 Use the quantitative dataset provided: Perform the following tasks using suitable spreadsheet skills, formulas and functions. (a) Cleanse and organise the dataset to enable data analytics to take place. You should use a range of suitable spreadsheet skills categorised as basic, medium and complex (as listed in the spreadsheet skills, Appendix A).
	AO3: Apply knowledge, skills and understanding to identify audience needs and plan digital products and communications that meet these needs.
3	5 marks - comprehensive application of a range of suitable spreadsheet skills, formulas and functions to produce fully cleansed and organised data - the response includes the use of at least three complex and three other (either basic or medium) suitable spreadsheet skills as categorised in Appendix A.
2	3-4 marks - adequate application of suitable spreadsheet skills, formulas and functions to produce adequately cleansed and organised data. - the response includes the use of at least two complex and two other (either basic or medium) suitable spreadsheet skills as categorised in Appendix A.
1	1-2 marks - basic application of suitable spreadsheet skills, formulas and functions to attempt to cleanse and organise data. - the response includes the use of at least one complex and one other (either basic or medium) suitable spreadsheet skill as categorised in Appendix A.
0	0 marks No response attempted or nothing worthy of credit.

Band	Task 1 (b) Using your cleansed and organised dataset, apply suitable data analytic skills to identify: • audience needs • audience trends • audience preferences. Present your findings in a suitable format - which should include appropriate graphs or charts.
	AO3: Apply knowledge, skills and understanding to identify audience needs and plan digital products and communications that meet these needs.
3	5 marks • comprehensive application of knowledge, skills and understanding of data analytics to identify audience needs, trends and preferences • the findings are presented in a very clear and well-structured format which includes appropriate graphs or charts
2	3-4 marks • satisfactory application of knowledge, skills and understanding of data analytics to identify audience needs, trends and preferences • the findings are presented in a clear and structured format which includes mostly appropriate graphs or charts
1	1-2 marks • basic application of knowledge, skills and understanding of data analytics to identify either audience needs, trends or preferences • the findings are presented in an unclear or unstructured format, graphs or charts, and may not be appropriate
0	0 marks No response attempted or nothing worthy of credit.

Band	Task 2 Develop a digital project proposal for the multipage website and chosen digital product. You should use the client brief, audience needs, trends and preferences, and the qualitative data provided. (a) Your digital project proposal must include: Specific and measurable success criteria that includes: • alignment with data analytics results • design aspects that reflect qualitative data provided • functionality and usability.
	AO3: Apply knowledge, skills and understanding to identify audience needs and plan digital products and communications that meet these needs.
3	5 marks • comprehensive application of knowledge and understanding of audience needs, trends and preferences to develop specific and measurable success criteria that includes all of the following: • alignment with data analytics results • design aspects that reflect qualitative data provided • functionality and usability • the success criteria clearly links relevant aspects of the client brief and the qualitative data
2	3-4 marks • adequate application of knowledge and understanding of audience needs, trends and preferences to develop specific and measurable success criteria that includes some of the following: • alignment with data analytics results • design aspects that reflect qualitative data provided • functionality and usability • the success criteria links relevant aspects of the client brief and the qualitative data

1	1-2 marks • basic application of knowledge and understanding of either audience needs or trends or preferences to develop specific or measurable success criteria that includes at least one of the following: • alignment with data analytics results • design aspects that reflect qualitative data provided • functionality and usability • the success criteria makes minimal links between relevant aspects of the client brief or qualitative data
0	0 marks No response attempted or nothing worthy of credit.

Band	Task 2 (b) Time planning document to ensure the development process is completed on time, including: • tasks • activities • milestones.
	AO3: Apply knowledge, skills and understanding to identify audience needs and plan digital products and communications that meet these needs.
3	5 marks • comprehensive application of knowledge and understanding of time planning to ensure the digital products are completed on time • the time planning document effectively and correctly communicates all tasks, activities and milestones
2	3-4 marks • adequate application of knowledge and understanding of time planning to ensure the digital products are completed on time • the time planning document communicates some tasks, activities and milestones
1	1-2 marks • basic application of knowledge and understanding of time planning • the time planning document communicates minimal tasks or activities or milestones
0	0 marks No response attempted or nothing worthy of credit.

Band	Task 3 (a) Using your success criteria, client brief and qualitative data, complete the following tasks: (a) Plan annotated initial design options for: • a multipage website • your chosen digital product. Please note. You must plan at least two design options for each digital product.
	AO3: Apply knowledge, skills and understanding to identify audience needs and plan digital products and communications that meet these needs.
5	9-10 marks • the annotated initial design options demonstrate excellent application of knowledge and understanding of effective design for all digital products • annotations communicate all success criteria, all relevant aspects of the client brief and all relevant qualitative data • all sound aspects and all visual aspects are communicated in the initial design options.
4	7-8 marks • the annotated initial design options demonstrate very good application of knowledge and understanding of effective design for all digital products • annotations communicate most success criteria, most relevant aspects of the client brief and most relevant qualitative data • most sound aspects and most visual aspects are communicated in the initial design options.
3	5-6 marks • the annotated initial design options demonstrate good application of knowledge and understanding of effective design for most digital products • annotations communicate some success criteria, some relevant aspects of the client brief and some relevant qualitative data • some sound aspects and some visual aspects are communicated in the initial design options.
2	3-4 marks • the annotated initial design options demonstrate basic application of knowledge and understanding of effective design for most digital products • annotations communicate minimal success criteria, minimal aspects of the client brief and minimal qualitative data • minimal sound aspects and minimal visual aspects are communicated in the initial design options.

1	1-2 marks - the annotated initial design options demonstrate limited application of knowledge and understanding of effective design for some digital products - annotations communicate minimal success criteria or minimal aspects of the client brief or minimal qualitative data - minimal sound aspects or minimal visual aspects are communicated in the initial design options.
0	0 marks No response attempted or nothing worthy of credit.

Band	Task 3 Select the chosen design option that you will implement for your multipage website and chosen digital product. Complete the following task based on your selection: (b) Justify your choices of selected design options based on your success criteria.
	AO4: Develop, test and evaluate digital products that meet the needs of specified audiences.
3	5 marks - comprehensive justification of the selected design option for the multipage website that reflects all aspects of the success criteria - comprehensive justification of the selected design option for the chosen digital product that reflects all aspects of the success criteria.
2	3-4 marks - adequate justification of the selected design option for the multipage website that reflects most aspects of the success criteria - adequate justification of the selected design option for the chosen digital product that reflects most aspects of the success criteria.
1	1-2 marks - basic justification of the selected design option for the multipage website that reflects some aspects of the success criteria - basic justification of the selected design option for the chosen digital product that reflects some aspects of the success criteria.
0	0 marks No response attempted or nothing worthy of credit.

Band	Task 4 (a) Create a functional multipage website which uses the information provided by the client and which reflects your chosen design option from Task 3. Your website should use: • suitable media • navigation • hyperlinks • consistent layout and styles. You should use a range of suitable website development skills categorised as basic, medium and complex (as listed in Appendix A) when creating your multipage website. AO4: Develop, test and evaluate digital products that meet the needs of specified audiences.
5	9-10 marks • the multipage website is fully functional and includes all relevant information provided in the client. It contains all the following: • suitable media • effective navigation between pages • hyperlinks to external documents • consistent layout and styles • a well-developed multipage website that reflects all aspects of the chosen design option • at least five complex, five medium and five basic relevant website development skills are used effectively in the production of the website.
4	7-8 marks • the multipage website is functional and includes most relevant information provided by the client. It contains most of the following: • suitable media • effective navigation between pages • hyperlinks to external documents • consistent layout and styles • a developed multipage website that reflects most aspects of the chosen design option • at least four complex, four medium and four basic relevant website development skills are used in the production of the website.

3	5-6 marks - the multipage website is partially functional and includes some relevant information provided by the client, as well as some of the following: - suitable media - effective navigation between pages - hyperlinks to external documents - consistent layout and styles - an adequately developed multipage website that reflects some aspects of the chosen design option - at least three complex, three medium and three basic relevant website development skills are used to produce the website.
2	3-4 marks - the multipage website is basic with minimal functionality, it includes information provided by the client with minimal relevance. It includes at least two of the following list: - suitable media - effective navigation between pages - hyperlinks to external documents - consistent layout and styles - a simple multipage website that reflects minimal aspects of the chosen design option - at least six complex, medium or basic website development skills are demonstrated.
1	1-2 marks - the multipage website is limited and not functional, information is mostly irrelevant. It contains at least one of the following list: - suitable media - effective navigation between pages - hyperlinks to external documents - consistent layout and styles - a poorly developed multipage website that barely reflects the chosen design option - at least three complex, medium or basic website development skills are demonstrated.
0	0 marks No response attempted or nothing worthy of credit.

Band	Task 4 (b) Using your selected design option, create a multilevel computer game that uses: • scripting-based languages to control game behaviour • game characters, objects and environments including animation • sound effects and background music to enhance the gaming experience • intuitive, interactive and engaging interface. You should use a suitable range of suitable game development techniques from each level of complexity (categorised as basic, medium and complex, as listed in Appendix A).
	AO4: Develop, test and evaluate digital products that meet the needs of specified audiences.
5	21-25 marks • the computer game demonstrates excellent development of all technical skills including: • highly effective control of game behaviour • advanced use of designing and using game characters, objects and environments • the computer game is multilevel • includes sound effects and background music which are highly effective in enhancing the gaming experience • all interface elements are intuitive, interactive and engaging • at least five complex, five medium, and five basic game development techniques are applied, which are all highly suitable • a highly-developed computer game that fully reflects all success criteria, chosen design options and qualitative data.
4	16-20 marks • the computer game demonstrates very good development of most technical skills, including: • effective control of game behaviour • good use of designing and using game characters, objects, and environments • the computer game is multilevel • includes sound effects and background music, which enhance the gaming experience • most interface elements are intuitive, interactive and engaging • at least four complex, four medium, and four basic game development techniques are applied, which are nearly all suitable • a developed computer game that reflects most success criteria, chosen design options and qualitative data.

3	11-15 marks - the computer game demonstrates adequate development of technical skills, including: - some control of game behaviour - some designing and using game characters, objects and environments - the computer game has multiple levels, though some may lack depth - includes some sound effects and background music, but their effectiveness is limited - some interface elements are interactive and engaging, but there may be inconsistencies - at least three complex, three medium, and three basic game development techniques are applied, which are somewhat suitable - a functional computer game that reflects some success criteria, chosen design options, and qualitative data.
2	6-10 marks - the computer game demonstrates basic development of technical skills, including: - minimal control of game behaviour - minimal game characters, objects, and environments - the computer game may lack multiple levels or have poorly developed levels - includes few sound effects or background music, which may not enhance the experience - some interface elements are present but lack interactivity or engagement - at least six complex, medium or basic game development techniques is applied, which are somewhat suitable - a partially developed computer game that reflects few success criteria, chosen design options, and qualitative data.
1	1-5 marks - the computer game demonstrates limited development of technical skills, including: - limited or missing control of game behaviour - limited or missing game characters, objects, and environments - the computer game is single-level or incomplete - limited or no sound effects or background music - interface elements are present but lack functionality or engagement - at least three complex, medium, or basic game development techniques are applied, which lack suitability - an undeveloped computer game that reflects very few success criteria, chosen design options, and qualitative data.
0	0 marks No response attempted or nothing worthy of credit.

Band	Task 4 Using your selected design options, create a 2D animation that uses: • suitable animation production skills • suitable sound to enhance the animation • multiple animation sets to depict various scenes and actions • animation timeline skills to control the timing and movement of animations. You should use a suitable range of animation techniques from each level of complexity (categorised as basic, medium and complex, as listed in Appendix A).
	AO4: Develop, test and evaluate digital products that meet the needs of specified audiences.
5	21-25 marks • the animation demonstrates excellent development of all technical skills, including: • highly effective design of a range of characters, including animated sprites • advanced use of suitable animation production skills • embedded sound is well-synchronised and enhances the animation effectively • multiple animation sets are used effectively to depict various scenes and actions • precise control of timing and movement is evident through skilful use of the animation timeline • at least five complex, five medium and five basic skills animation techniques are applied, which are all highly suitable • a highly developed animation that fully reflects all success criteria, chosen design options and qualitative data.
4	16-20 marks • the animation demonstrates very good development of most technical skills, including: • effective design of a range of characters, including animated sprites • good use of suitable animation production skills • embedded sound enhances the animation, though minor synchronisation issues may be present • multiple animation sets are used, though some transitions may lack refinement • good control of timing and movement through the animation timeline • at least four complex, four medium and four basic skills animation techniques are applied, which are nearly all suitable • a developed animation that reflects most success criteria, chosen design options and qualitative data.

3	11-15 marks - the animation demonstrates adequate development of technical skills, including: - some variety in character design, including animated sprites - some use of suitable animation production skills - embedded sound is included but may not always align with the animation effectively - multiple animation sets are present but may lack consistency in movement or transitions - some control of timing and movement, but inconsistencies are evident - at least three complex, three medium and three basic skills animation techniques are applied, which are somewhat suitable - a functional animation that reflects some success criteria, chosen design options and qualitative data.
2	6-10 marks - the animation demonstrates basic development of technical skills, including: - limited variety in character design, with some animated sprites - minimal use of animation production skills, focusing mainly on basic techniques - embedded sound may be included but is poorly synchronised or ineffective - few animation sets are used, with noticeable gaps in continuity - basic control of timing and movement, with evident inconsistencies - at least six complex, medium or basic skills animation techniques is applied, which are somewhat suitable - a partially developed animation that reflects few success criteria, chosen design options and qualitative data.
1	1-5 marks - the animation demonstrates limited development of technical skills, including: - limited variety in character design, with few or no animated sprites - limited or missing animation production skills, relying only on basic movement with no refinement - no embedded sound or sound is completely misaligned with the animation - limited animation sets, with little effort to depict different scenes or action. - limited control of timing and movement, leading to a disjointed animation - at least three complex, medium, or basic skills animation techniques are applied, which lack suitability - an undeveloped animation that reflects very few success criteria, chosen design options and qualitative data.
0	0 marks No response attempted or nothing worthy of credit.

Band	Task 5 (a) Evaluate the effectiveness of your ongoing testing of your digital products. Refer to how your testing helped you to: • identify and remove errors • ensure the digital products operated as expected • meet the success criteria.
	AO4: Develop, test and evaluate digital products that meet the needs of specified audiences.
3	5 marks • the response is comprehensive, demonstrating a detailed evaluation of how ongoing testing helped achieve the following: • identify and remove errors • ensure the digital products operated as expected • meet the success criteria • a comprehensive evaluation of the impact of testing at different stages
2	3-4 marks • the response is adequate, demonstrating a sound evaluation of how ongoing testing helped achieve the following: • identify and remove errors • ensure the digital products operated as expected • meet the success criteria • an adequate evaluation of the impact of testing at different stages, though coverage may lack some depth or detail.
1	1-2 marks • The response is basic, demonstrating limited evaluation of how ongoing testing helped achieve the following: • identify and remove errors • ensure the digital products operated as expected • meet the success criteria • a basic evaluation of impact of testing at different stages, but this may be underdeveloped or lack clarity.
0	0 marks No response attempted or nothing worthy of credit.

Band	Task 5 (b) Evaluate how well your digital products meet your audience needs, trends and preferences. Refer to your: • completed digital products • development process • application of skills.
	AO4: Develop, test and evaluate digital products that meet the needs of specified audiences.
3	5 marks • the response is comprehensive and insightful, demonstrating an effective evaluation of how well the digital products meet audience needs, trends and preferences • the response thoroughly evaluates the completed digital products, development process and application of skills.
2	3-4 marks • the response is relevant and appropriate, demonstrating a sound evaluation of how well the digital products meet audience needs, trends and preferences • the response clearly evaluates the completed digital products, development process and application of skills, though coverage may lack some depth or detail.
1	1-2 marks • the response is basic, demonstrating a limited evaluation of how the digital products meet audience needs, trends and preferences • the response makes some reference to the completed digital products, development process and application of skills, but this may be underdeveloped or lack clarity.
0	0 marks No response attempted or nothing worthy of credit.

Mapping of questions to specification content and assessment objectives: Unit 2

Question	Mark allocation

Information for candidates

The following information has been taken from the [JCQ Information for candidates – non-examination assessments](#) and the [JCQ Artificial Intelligence \(AI\) Use in Assessments: Protecting the Integrity of Qualifications](#). This tells you about things that you **must** and **must not** do when you are completing your assessment. If there is anything that you do not understand, you **must** ask your teacher.

Preparing your work

- When you submit your work and sign your candidate declaration form, you need to ensure that your final product reflects your own independent work and isn't copied or paraphrased from another source such as an AI tool.
- If you receive help and guidance from someone other than your teacher, you **must** tell your teacher who will then record the nature of the assistance given to you.
- If you worked as part of a group on a task, you **must** each write up your own account of the assignment. Even if the data you have is the same, you **must** describe in your own words how that data was obtained, and you **must** independently draw your own conclusions from the data.
- Take care of your work and keep it safe. **Do not** leave it lying around where your classmates can find it or share it with anyone, including posting it on social media. You **must** always keep your work secure and confidential whilst you are preparing it; **do not** share it with your classmates. If it is stored on the computer network, keep your password secure. Collect all copies from the printer and destroy those you do not need.
- **Do not** be tempted to use pre-prepared online solutions (such as those produced by AI tools and chatbots) – this is cheating. Electronic tools used by WJEC can detect this sort of copying.
- You **must not** write inappropriate, offensive or obscene material.

Plagiarism

Plagiarism involves taking someone else's words, thoughts or ideas and trying to pass them off as your own. **It is a form of cheating which is taken very seriously.** Don't think you won't be caught; there are many ways to detect plagiarism:

- Markers can spot changes in the style of writing and use of language.
- Markers are highly experienced subject specialists – they may have read the source you are using, or even marked the work you have copied from!
- Internet search engines and specialised computer software can be used to match phrases or pieces of text with original sources and to detect changes in the grammar and style of writing or punctuation.

Penalties for breaking the regulations

If it is discovered that you have broken the regulations, one of the following penalties will be applied:

- the piece of work will be awarded zero marks
- you will be disqualified from that unit for the assessment series in question
- you will be disqualified from the whole subject for that assessment series
- you will be disqualified from all subjects and barred from entering again for a period of time.

WJEC will decide which penalty is appropriate.

Remember – it's your qualification so it needs to be your own work

Candidate Declaration Form

You must complete **Part A** and **Part B** of this form

Centre No:								Centre Name:	
Candidate No:								Candidate Name:	
Unit Title:									

Part A: Candidate Declaration

References: Give details of the exact source used in the assignment. Please note, if you have used the 'reference table template' found in Appendix 2 of the document named 'Conducting Non-examination Assessments in National 14-16 Qualifications – Guide for Candidates', you can simply say 'see reference table'.

Authentication Declaration

I declare that my work was completed independently and without any assistance beyond that which was permitted. All work is my own, except for any non-original material clearly credited above. This work has not been submitted for any other qualification. I have clearly referenced any sources and any Artificial Intelligence tools used in the work. I understand that false declaration is a form of malpractice.

Candidate Signature:	Date:
----------------------	-------

Part B: GDPR Consent

- WJEC may select your work for use at teacher training events and subsequently upload it onto WJEC's secure website (accessible only to teachers via a secure login). Your name would be removed from your work before we use it. All materials are reviewed regularly and are removed when no longer relevant to our qualifications.
- WJEC may select your work for use in teaching and learning resources published on the WJEC public website. Your name would be removed from your work before we use it. All materials are reviewed regularly and are removed when no longer relevant to our qualifications.
- You understand that this agreement may be terminated at any time through written request³.
- For further details about how we process your data please read WJEC's [privacy notice](#).

If you prefer that WJEC **does not** use your work in this way, please tick here: ☐

End of Candidate Assessment Pack

³ You must be over 13 to provide consent. You may withdraw your consent at any time by contacting WJEC on qualifications@wjec.co.uk. Please include the title of the work, the year of assessment, centre name and number, candidate name and the unit title in the communication. The work will then be removed from the secure website.
